

IGALP – Industry-Guided Applied Learning Program

Bringing real industry learning into the academic journey

What is IGALP?

IGALP is a continuous **Industry-Guided Applied Learning and Certification Program** that helps students apply what they learn in their curriculum to **real industry situations**. Unlike conventional placement platforms that focus primarily on recruitment, IGALP introduces industry engagement *very early* in the student's graduation and continues this engagement throughout the entire journey through applied learning, capability assessment, and placement preparation.

Industry situations are contributed by AIBIGO's extensive network of industry partners, including startups, growing companies, and established organizations across multiple sectors. This exposes students to diverse workplace situations, professional expectations, and industry perspectives **beyond a single internship or placement experience**.

The program is delivered through a **Capability Intelligence Center (CIC)** every week, established within the institute

IGALP – Industry-Guided Applied Learning Program

Bringing real industry learning into the academic journey

One of the biggest gaps between academia and industry today is that students learn subjects individually, through their academic curriculum or conventional skill-development platforms, but are rarely taught how to connect & apply them to inter-disciplinary professional situations. IGALP bridges this gap by gradually mentoring students through assisted learning taking them from isolated subjects to solving cross-concept and interdisciplinary industry scenarios while continuously refining their approach through industry feedback.

IGALP Certificate is awarded to students who complete the prescribed journey of participation in 100s of curated industry-guided scenarios and evaluation across 15+ industry-defined capability metrics spanning technical, cognitive, & professional competencies.

Unlike conventional certification programs that primarily measure knowledge through course completion or examinations, **IGALP evaluates the student's continuous development throughout the entire learning journey**, preparing them for placements & further academic pursuits.

WHY IGALP IS THE MISSING LINK

Bridging academic learning and real industry application

Students today have access to more knowledge than ever through their academic curriculum, online courses, AI tools, and other learning platforms. However, students often learn subjects in isolation and are rarely taught how to connect and apply them to real professional situations.

At the same time, industry typically evaluates students through a short placement process, even though professional capability develops continuously throughout graduation. As a result, much of a student's growth remains invisible to industry.

How IGALP Works

A Structured Pathway from Academic Learning to Industry Scenarios

IGALP follows a **progressive learning model** that transforms academic knowledge into professional capability. Throughout graduation, the emphasis gradually shifts from guided learning exercises toward increasingly complex industry scenarios **helping in supporting their placements and advanced studies.**

Graduation Stage	Concept Exercises	Industry Scenarios	Placement & Aptitude
1st Year	Very High	Low	Medium
2nd Year	High	Medium	Medium
3rd Year*	Medium	High	High
4th Year*	Low	Very High	High

* For two and three year programs, the IGALP progressive model is adjusted accordingly

How IGALP Works

Continuous Industry Participation through CIC

IGALP is conducted within the institution through a **Capability Intelligence Center (CIC)**, established by the institution in collaboration with AIBIGO using an existing laboratory or classroom. Students participate in **structured weekly** sessions throughout their graduation, creating a continuous engagement model between academia and industry.

The CIC provides a structured and proctored environment for conducting learning activities, industry scenarios, and capability assessments. It can be established with minimal investment by utilizing existing institutional infrastructure, eliminating the need for dedicated laboratories or additional capital expenditure.

Each weekly IGALP session combines exercises (with and without AI) covering concept application and cross-concept learning with industry-validated scenarios and placement preparation activities. Through continuous practice and periodic **industry feedback**, students learn to apply knowledge, analyse problems, use AI effectively, make decisions, understand interdisciplinary impacts, and **navigate professional situations more confidently**.

Continuous Improvement and Capability Assessment

Participating industries contribute scenarios and define the expectations they would like to see from graduates while solving them. These expectations are translated into a common assessment framework comprising **15+ industry-defined capability metrics** spanning technical, cognitive, and professional competencies.

AI-assisted concept and application exercises are designed for continuous learning and practice, *while* industry scenarios are conducted through structured, proctored assessments.

When students attempt an industry scenario, the focus is not only on the final answer but also on how they approach and solve the problem. **AI continuously guides students by comparing their responses with industry-curated approaches, helping them understand alternative solutions, refine their thinking, & improve their future responses.**

Over time, repeated exposure to hundreds of industry-guided scenarios creates a **Graduate Capability Profile** that provides industry with a broader understanding of a student's capabilities beyond a GPA, internship, or placement interview.

Institutional Value and Measurable Outcomes

IGALP is designed to create measurable value for the institution at multiple levels

Student Development

- Greater student engagement in industry-guided learning
- Improved performance across 15+ capability metrics
- Comprehensive Graduate Capability Profiles
- Continuous progress throughout graduation
- Early academic and mentoring interventions

The objective is to shift from end-of-course placement preparation to continuous capability development throughout graduation.

Institutional Outcomes

- Improved placements and student selection
- Higher graduate salaries
- Enhanced reputation, admissions, and student demand
- Access to an extensive industry network
- Department-wise performance insights
- Industry and inter-institutional collaborations
- More internships and live projects
- Research and consultancy opportunities
- Accreditation and quality improvement
- Faculty exposure to industry practices

IGALP creates a continuous system through which the institution can develop, measure and improve the factors that influence placements, industry engagement, admissions, reputation, funding and accreditation outcomes.

What Drives Our Industry Partnerships

Through IGALP, industry engages with graduate development ***much earlier*** than the traditional placement cycle. This creates measurable advantages in **hiring efficiency, talent quality, talent access, and long-term collaboration.**

Cost Efficiency

- Reduced screening effort
- Reduced interviewing effort
- Reduced onboarding costs
- Lower training requirements

Time Advantage

- Earlier access to students
- Shorter hiring cycles
- Faster candidate identification
- Reduced time-to-productivity

Better Talent Decisions

- Better-prepared graduates
- Industry-defined evaluation
- Better visibility into capabilities
- More reliable hiring decisions
- 15+ capability metrics evaluation

Expanded Talent Access

- Much larger graduate pool
- Exposure to multiple institutions
- Continuous student tracking
- Early talent identification

Strategic Collaboration

- Influence graduate development
- Align academics with industry needs
- Research and consultancy opportunities
- Long-term institutional partnerships

	Category	15 Industry-curated Capability Metrics
1	Technical	Technical Application
2		Problem Solving
3		Learning Agility
4		Effective use of AI tools
5		Systems Thinking
6	Cognitive	Decision Making
7		Analytical Reasoning
8		Adaptability
9		Critical Thinking
10		Creativity / Innovation
11	Professional	Communication (written + verbal)
12		Collaboration
13		Professional Judgement
14		Ethics & Responsibility
15		Project Planning & Execution

What IGALP is Not

Understanding the difference between IGALP and other programs

Not Just

Placement coaching program

but also makes you a better professional, ready for the industry

Not Just

An aptitude-testing platform

but also makes you learn and improvise your problem solving ability

Not

A technical skill-dev platform

but trains you to apply them professionally

A certification program based on continuous industry application

Students work through industry scenarios throughout graduation, receive AI-assisted feedback aligned with industry expectations, and develop across **15+ industry-defined capability metrics**.

The IGALP Certificate represents *CAPABILITY*, not just COMPLETION

It reflects structured exposure to industry scenarios and evaluation across knowledge application, problem analysis, decision-making, and professional judgment.

15+

Industry Capability
Parameters

**INDUSTRY READY
PROFESSIONAL**

IGALP prepares graduates for industry application – not simply for an industry test or interview.

Becoming Part of the AIBIGO Circle

Institutions adopting IGALP become part of the **AIBIGO Circle** — a growing ecosystem connecting academic institutions, industries, and experts. The **Circle** provides access to hundreds of industries across India, including startups, established organizations, and multinational companies.

This network enables institutions to bring industry situations and workplace contexts from organizations **across different cities and regions** into the academic environment, including companies that may not otherwise visit the campus. As the ecosystem expands, institutions gain greater opportunities for placements, internships, research, consultancy, and long-term industry collaboration.

COMMERCIAL & ENGAGEMENT MODEL

— OUR PARTNERSHIP JOURNEY —

MoU

The MoU formalizes the institution's participation in the AIBIGO Circle and provides access to a growing network of industries across India. It creates a structured pathway for establishing IGALP and developing long-term industry engagement within the institution.

Membership in the Circle does not require any upfront financial commitment and allows institutions to gradually build their industry ecosystem over time.

IGALP connects what students learn with how industry expects them to apply it.
